

TECHNICAL PRODUCT SHEET

STANDARD DOCK LEVELLER

Armo Dock Leveller - RSA model - guarantee operators high ease of use, great adaptability to loading situation and the quality of a standard product at a very interesting price. The capacity calculations have been executed following the RULE EN 1398:2009, which defines the way of load application when the leveller is in rest or open position and correctly laid to the vehicle. Nominal capacity of Armo dock levellers is 6000Kg.

For the loading operations it is possible to use forklifts, electrical trans-pallet or manuals or similar equipment, with heavy loads not exceeding the scope.

Armo dock levellers main features:

- 100% Made in Italy
- Built following a robotic process that allows the control and repeatability from which an increase of reliability derives
- They have the power pack positioned at the front of the frame for an easier ordinary maintenance
- They are equipped with self-cleaning hinges
- It is possible to load uniformly up to 9000Kg in rest position in order to increase the surface suitable as warehouse storage area.
- The lifting cylinder and the related hydraulic pipes have been designed to withstand workloads and burst pressures far exceeding those required by the standards.
- In the event of a power failure it is always possible to bring the platform in rest position in order to allow the overhanging door to close.
